TECHNICAL SKILLS & COURSEWORK

C, C++, Python, Java, JavaScript, SQL, PostgreSQL, Ubuntu, Visual Studio Code, IntelliJ, Jupyter Notebooks, Git, Linux, Assembly, MATLAB Windows, Docker, Microsoft Office Suite, SharePoint, Algorithms, Data Structures, Data Modeling, Operating Systems, Database Management Systems, Software Development, Discrete Structures, Linear Algebra, Calculus, OOP

PROJECTS AND PROFESSIONAL DEVELOPMENT

New Venture Lab Program Director, Gonzaga University August 2022 – Present

- Leading a student-run business consulting firm, working with 8-11 entrepreneurs each semester through a structured three-phase scope and achieving a 97% satisfaction rate from entrepreneurs over the past four semesters.
- Supervising and advising 8-11 project managers and teams of 5-7 Gonzaga students per semester, providing mentorship in a fast-paced environment to ensure successful project outcomes.
- Overseeing project intake by reviewing 40+ entrepreneur applications and coordinating with 20 board members to create a positive, practical learning experience for 75+ students per semester.
- Previously served as a consultant and project manager; continue to guide teams on data analysis, database design, web development, product development, demographic research, advertising, and SEO analysis.

Computer Science Teacher Assistant, Gonzaga University August 2024 – Present

- Recognized for coursework excellence and assisting students with programming, data structures, and algorithms.
- Grading assignments and exams, providing timely constructive feedback, and simultaneously reviewing important concepts.
- Demonstrating ability to be flexible, communicative and quickly adapt during busy drop-in hours.

Hogan Entrepreneurial Leadership Program, Gonzaga University January 2023 – Present

- Learning the principles of entrepreneurship and preparing for leadership in the workforce with 25 students in a highly competitive program.
- Actively honing entrepreneurial and professional skills through hands-on experiences, workshops, and mentorship.
- Designed "Fair Share," a B2B platform for banks to acquire anonymized user spending data. This platform empowers banks with client insights for targeted advertising of bank services. Additionally, "Fair Share" provides a user-friendly UI for clients to track spending, set financial goals, and receive AI-powered recommendations to optimize their earnings.
- Leveraged data science techniques including market research analysis and competitor spend analysis to inform the platform's design, user experience, and business proposition.

Classroom Projects, Gonzaga University August 2022 – Present

- Analyzed national park species data using databases, SQL queries, python, statistical libraries, and data visualization libraries to categorize and explore relationships between species populations and biomes into charts and graphs.
- Collaboratively designed and developed games (Connect Four and Farkle), gaining experience in technical communication, code collaboration using Git, and core software development concepts.
